Net Zero Commitment

Blueteq has long been at the forefront of innovation through the development of web based healthcare software. But the company's commitment to innovation extends beyond just software. Blueteq is committed to using renewable energy sources to power its operations.

The company has invested in a battery and solar powered system that enables the generation and storage of over 80% of the company's electricity requirements. This is then supplemented with energy sourced from 100% renewable sources.

Blueteq also provides onsite charging stations for electric cars making it easy for employees and visitors to charge their vehicles while they are onsite. Additionally, the company supports and encourages employees in purchasing electric vehicles.

We believe it is our responsibility as a company to do our part in reducing carbon emissions and protecting the environment.

Blueteq Ltd is committed to achieving Net Zero emissions by 2050 for emissions scopes 2 and 3. The commitment was made on 06/01/2020 by the board of directors.
